

System Enhancement SE 127: July 25, 2015, Release Summary

Issue Date: July 24, 2015

Audience: Human Resource Offices

Release Item	Description
FL-SOLARIS Facility Interface	Implement a new facility interface so agency positions can be accurately associated with the facilities maintained in FL-SOLARIS (facility manager database). The new FL-SOLARIS interface will include state-owned buildings that are marked in FL-SOLARIS as having employees in them and all leased buildings. Refer to the FL-SOLARIS Interface and People First Screen Enhancements document for additional information on this enhancement.
Org Management – Position Location Address Screen	<p>Enhancements to the Location Address screen in Org Management to only allow valid FL-SOLARIS facilities to be assigned to a position and remove the ability to manually enter facility information (e.g., facility address, facility campus name). With these enhancements, all current position Location Address records will be systematically end dated and a new Location Address record created to assign a valid FL-SOLARIS facility. Refer to the FL-SOLARIS Interface and People First Screen Enhancements document for additional information on enhancements to this screen.</p> <p>Refer to the Position - Work Mailing and Location Addresses instructional guide for detailed information on the new screen functionality.</p>
Org Management – Position Attributes Screen	Add two new fields to the Position Attributes screen in Org Management to identify the percent of time a position is eligible or required to telework. The new fields will be titled Telework Eligible Percentage and Telework Required Percentage and will be required if the telework eligible and/or telework required indicators are selected on a position. The enhancement is necessary so the Department of Management Services' Division of Real Estate Development (REDM) can accurately report on the number of positions assigned to a facility versus the number of employees requiring workspace.
