

System Enhancement 72: 07/30/2011 Release Summary

Issue Date: July 29, 2011

Audience: HR Offices

Release Item	Description
Leave Payout Screen – Hours to Payout	This will correct the current defect where the number of hours to payout is being reverted to a previously saved and deleted record when creating a leave payout. This issue ONLY occurs if you create a leave payout, then delete the leave payout and attempt to create a new payout for the same leave type.
Leave Payout Screen – Special Compensation	This will correct the current defect where the wrong payout type is being forced to be selected when processing the second Special Comp payout for terminating employees. Currently the system is forcing the agency to use the payout type “5506 DROP/Term 11 Months Payout”, instead of employee termination.
Deduction Codes – Add Deduction Code for Indiana Withholding Tax	Add Deduction Code 0321 (Indiana Withholding Tax) to the Wage Permissibility Table for Department of Revenue.
Time Evaluation – Changes to Refresh Process	Changes have been made to the time evaluation refresh process to update leave balances in real-time (rather than the overnight process) based on the type of action being performed. Refer to the HR Professional User Guide, Section III: Leave & Attendance, “ General Leave Processing ” for an updated chart for when leave balances are updated.
BNI_001 File – Social Security Number Correction	This enhancement only impacts the benefit only (BENO) agencies (e.g., universities, etc.). This will correct the current defect where the employee’s Social Security Number is not being corrected when the change is being sent on the BNI_001 Employee Data file. Prior to this release, when a Social Security correction was sent on the BNI_001 Employee Data file, the SSN correction was not updating on the employee’s record.
